Reset Parameters

Confirm Routing Parameters

Optimizer Assumptions

- Open PMR's are included by default
- Inactive technicians in OneSource are excluded by default
- Techs start from their Home zip code
- Total daily technician capacity (time available to be on the clock) is calculated by taking the Available Hrs/Day * Overtime Multiplier. By default, a tech is set to be available for 10 hours a day (8 hrs/day * 1.25 Overtime Multiplier)

Instructions

Green columns are user-input fields

- Select branch location
- Adjust multipliers (if necessary)
- Select at least one PM Month
- Click "Confirm Routing Parameters" and the technician list will be populated on the right side
- Add additional employees to email recipient list (if necessary). All employees in this list will receive an email with the optimization results
- Adjust technician availability, starting locations, and include/exclude as required
- Click "Next" to proceed to the orders screen
