

This dashboard serves as the central hub for my Spotify project, providing an overview of key information and functionalities.

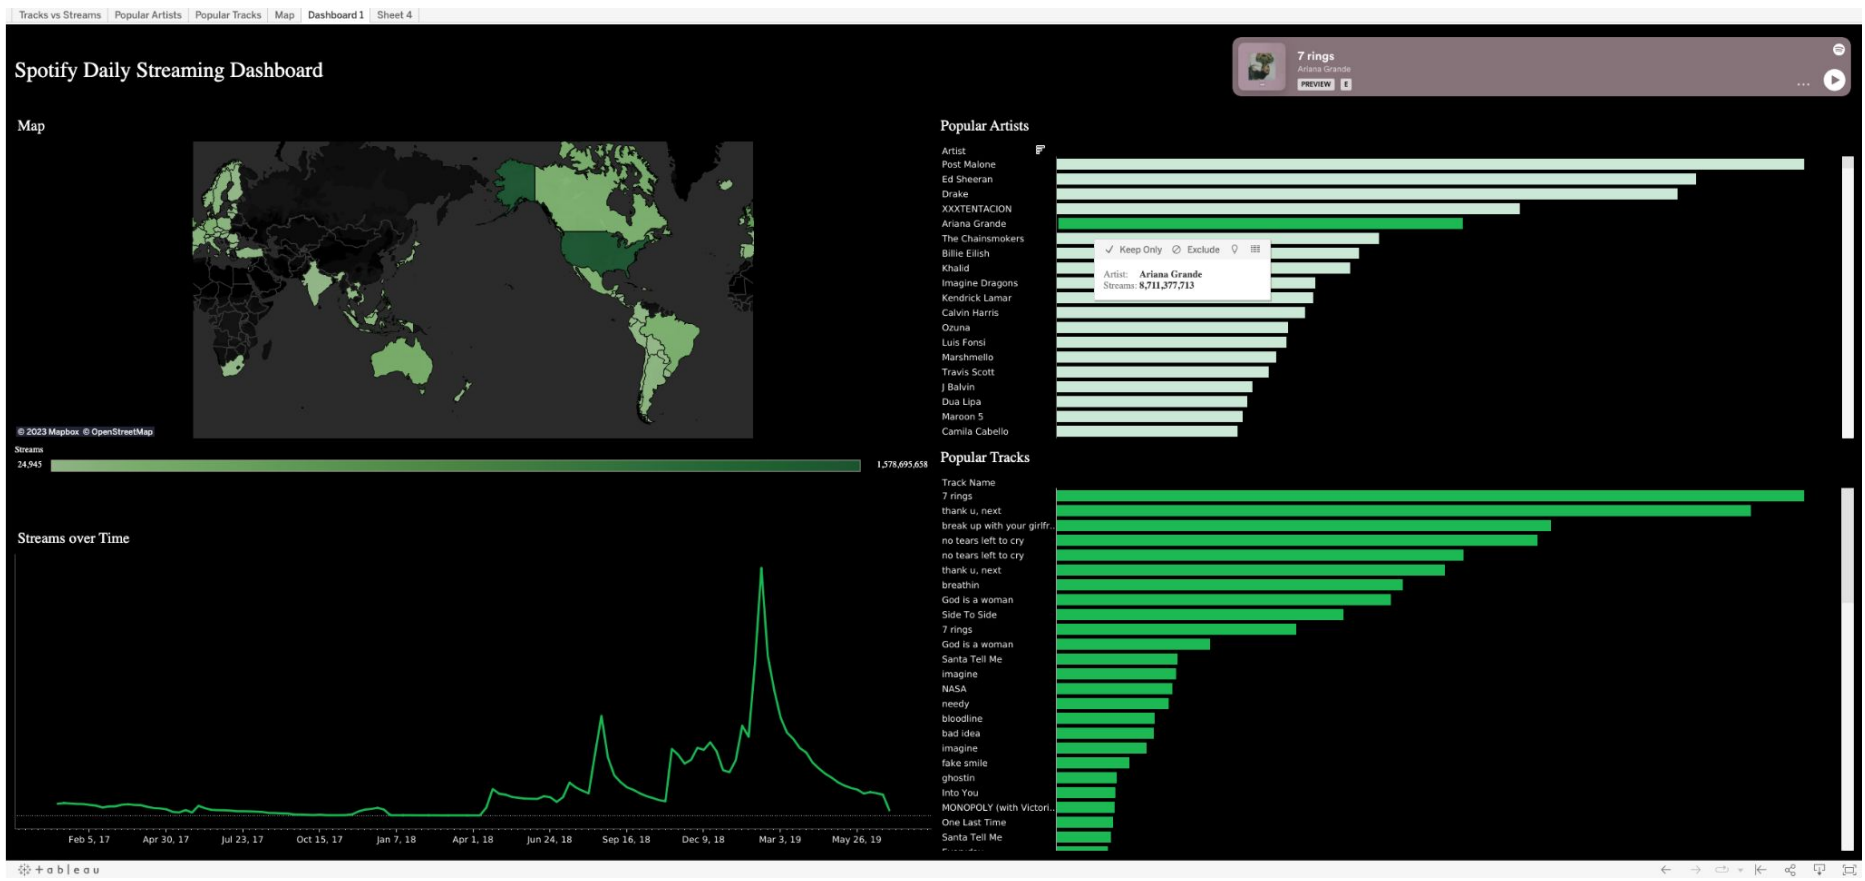

In the Map worksheet located in the top left corner, you can click on any green country/region to access the corresponding data. The other three worksheets will automatically adjust and filter based on your selection. The colors on the map range from light green, indicating fewer streams, to dark green, representing higher stream counts.

In the Streams over Time worksheet situated in the bottom left corner, you can hover your cursor over the line plot to view detailed information and insights.

In the Popular Artists worksheet located in the top right corner, you can choose your favorite artist and explore the streams data from different countries, track the streams over time, and discover their popular tracks.

In the Popular Tracks worksheet located in the bottom right corner, you can click on the track of your choice to view its name, URL, and number of streams. The most exciting feature is the embedded Spotify player in the top right corner, allowing you to simply click the play button and enjoy the music of your selected popular tracks.
